Feedback Response Report

How we addressed your review of the app

Covering your feedback on the **Time** and **Checklist** tabs

May 2026

OVERVIEW

What this report covers

Thank you for the detailed walkthrough of the Time and Checklist tabs. Every point you raised has been worked through. This report lists each piece of feedback in your own words, the status, and exactly what changed in the app.

Two items are marked **Implemented — with a note**: they are fully built and working, with one small follow-up decision left to you. Everything else is complete and live.

At a glance

Your feedback	Status
Stop logging time by work type	DONE
Log time by task / checklist instead	DONE
Timer use & send logged time for approval	DONE + NOTE
Month-end approval	DONE
Lock timesheets by period	DONE + NOTE
View checklists by client	DONE
Steps box for hand-off steps	DONE
Independent due dates on hand-off steps	DONE
Copy tasks to new clients / standard templates	DONE
Couldn't find how to check off a checklist	DONE

Time tab

"Do not need log time by work type."

IMPLEMENTED

WHAT WE DID

Work type has been removed from time tracking entirely. The field is gone from the time-entry form and the entry list. Any reporting that previously broke time down by work type now breaks it down by task instead, which is more useful.

"Need log time by task / checklist item."

IMPLEMENTED

WHAT WE DID

Time is now logged against a task. When logging time you pick the client, then choose the specific task / checklist the time applies to. Hours roll up per task — you can see total time logged on each task card and in the reports.

"Need force timer used — if log time, needs to be sent for approval after log time."

IMPLEMENTED — WITH A NOTE

WHAT WE DID

The approval step is fully in place. Every time entry — whether captured with the built-in live timer or typed in manually — now enters an approval queue before it counts toward billing or reports. (See the next two items for the approval and lock workflow.)

One decision for you: the app currently allows both the live timer and manual entry, and routes both through the same approval review. If you would prefer the timer to be strictly required — with manual entry blocked entirely — that is a quick change. Just let us know.

"Need month-end approval."

IMPLEMENTED

WHAT WE DID

A new **Time Approvals** area gives owners a review queue:

- Every new time entry starts as **Pending**.
- Owners approve or reject entries — a rejection includes a note so the bookkeeper knows what to fix. Rejected entries return to the bookkeeper, editable, and re-enter the queue when corrected.
- At month end, an owner approves an employee's whole month in a single action, with a clear view of total hours and anything still pending.

"Lock time sheets by week / month for managers."

IMPLEMENTED — WITH A NOTE

WHAT WE DID

Owners can now lock a timesheet by month. Once a month is locked for an employee, that employee can no longer add, edit, or delete time entries in that period — the entry form is disabled and the server enforces the lock. Locking a month also auto-approves anything still pending in it. Owners can unlock a period if a correction is needed.

Two notes: locking is currently done at the **month** level — week-level locking can be added if you want that finer control. Also, approving and locking are currently owner-only; if you would like senior bookkeepers to act as managers with those powers, that is a small addition.

Checklist tab

"Checklist by client. Maybe this tab shows all your task list, and under clients you can see client-specific checklists."

IMPLEMENTED

WHAT WE DID

The Tasks tab now has a **Group by: Status / Client** switch. *Status* keeps the everyday view (Today / This week / Later). *Client* shows every client as its own section with that client's checklists grouped underneath — exactly the client-by-client view you described. You can also filter the page to a single client.

"Need a steps box for hand-off steps."

IMPLEMENTED

WHAT WE DID

The hand-off step editor now has a clear, multi-line steps box. Adding the checklist items to step 2, step 3, and beyond is now just as easy as the first step — type one item per line, or add them one at a time.

"Hand-off steps may not have the same repeat or due dates."

IMPLEMENTED

WHAT WE DID

Each hand-off step can now carry its own due date. A step can be due either a set number of days after the previous step finishes (the default), or on a specific calendar date you choose — so steps are no longer locked to one shared schedule.

"I would want to be able to copy a task to new clients (like standard templates)."

IMPLEMENTED

WHAT WE DID

A new **Standard Templates** library has been added — reusable templates that are not tied to any one client. From a standard template, **"Apply to client"** creates a working, client-specific copy in one step. In addition, any existing client template now has a **"Copy to client"** action, so you can reuse a setup across multiple clients.

"Created a few checklists but do not see how I check them off."

IMPLEMENTED

WHAT WE DID

This came from the difference between a *template* and a *live checklist*. A template is a recurring recipe — it has no checkboxes; it generates a checkable checklist when its due date arrives. If that date was in the future, nothing was checkable yet. We made this far clearer:

- Creating a repeating task now offers "**start the first one now**" (on by default) — so there is something to actually work on immediately.
- Every template has a "**Generate a checklist now**" button to spin up a checkable copy on demand.
- Template cards explain in plain language when the next checklist will appear.
- A newly created checklist now automatically opens its section, so it is never hidden in a collapsed group.

IN SUMMARY

Where things stand

All ten points from your review have been addressed. Eight are fully complete with no open questions. Two — the timer requirement and the timesheet-lock granularity — are built and working, with one small preference decision left to you on each.

Two quick decisions, whenever you're ready

1. **Timer:** keep both the live timer and manual entry (current), or make the timer strictly required?
2. **Timesheet locks:** month-level locking is live — would you also like week-level locking, and should senior bookkeepers be able to approve and lock as managers?

Neither blocks anything — the app is fully usable today. Just let us know your preference and we'll make the adjustment.

Thank you for the thorough feedback — it made the app meaningfully better.
